ABOUT ME

I'm a software developer with experience across different companies and technologies, mostly JavaScript. I'm passionate about tech, always curious to learn new things, like diving into new tech or sharing ideas with others.

PROFESSIONAL EXPERIENCE

Senior Frontend Developer

Avenida+ - January 2024 - Present

I'm currently working on a large-scale e-commerce platform that serves multiple clients, each with their own specific requirements. We're continuously developing new features tailored to each client's needs, while also undergoing a major reengineering process. This includes revamping the architecture and rebuilding the entire front end using Next.js 15, Tailwind CSS, and Zustand for state management, with a strong focus on scalability, performance, and maintainability.

- Led the transition from a legacy front-end stack to a modern, modular architecture using current technologies widely adopted in the industry.
- Actively coordinated with clients to gather and refine requirements aligned with the new platform's capabilities.
- Introduced and maintained unit tests with a strong emphasis on user experience and interface behavior consistency.

Senior Frontend Developer

ARIIC - January 2022 - Present

As a freelance developer, I focus on building modern, responsive user interfaces for new digital products. I turn design mockups into clean, maintainable code with an emphasis on performance, accessibility, and user experience. I also deliver fully functional, optimized websites tailored to each client's goals, working closely with stakeholders to understand business needs and bring ideas to life.

- Developed responsive interfaces using modern JavaScript frameworks, ensuring cross-browser compatibility and optimal performance.
- Translated Figma and Adobe XD designs into pixel-perfect, accessible UIs with clean, reusable code.

Senior Frontend Developer

Longevo - May 2022 - January 2024

I worked on a back-office platform designed for experts and coaches to manage customer status and health. The project was built using React, Redux, and Next.js, consuming RESTful services. The UI was implemented using Material UI and Styled Components. Collaborating closely with the UX team, I received design prototypes via Figma, where I reviewed visual details such as colors, fonts, spacing, breakpoints, and images. I also provided UX feedback regularly, often aligning with designers to improve usability and maintain consistency across the app.

- Converted Figma designs into responsive, accessible components using Material UI and Styled Components.
- Contributed UX insights to improve workflows and interface clarity, streamlining the user experience for back-office users

Full Stack Developer

Blue Alba - May 2021 - June 2022

I worked on a financial services application focused on investment funds. The backend was developed using Node.js with GraphQL and RESTful APIs, while the frontend was built with React and Redux, complemented by libraries such as Redux Toolkit.

PROFESSIONAL EXPERIENCE

Frontend Developer

Globant Gannet Account- February 2021 - May 2021

Working on the Gannett account, one of the leading digital and print media companies in the USA.
The project utilizes Node.js, EJS templating, GraphQL, and vanilla JavaScript to deliver robust and dynamic web solutions.
(usatoday.com)

Globant E&Y Account- August 2020 - February 2021

The project was developed using React.js with hooks and TypeScript, leveraging Ant Design as the UI library.
Currently working on a new initiative combining React.js with PowerApps, PowerApps Component Framework, and Kendo UI to build dynamic, scalable applications.
The goal was to start the project from scratch with a new team, focusing on a fast-paced development to deliver a rapid MVP for the client.

Globant Deloitte Account- August 2019 - August 2020

Working on the Deloitte account, contributing to a large legacy Angular 7 application with many duplicated components, numerous services, and outdated code. Responsibilities included fixing bugs, managing issues and user stories, and extensively refactoring the codebase to improve maintainability and performance. Successfully planned, developed, and implemented new features and services. Collaborated closely with team members through daily and weekly meetings to identify and deliver the best solutions for application improvement.

ACADEMIC & PROFESSIONAL TRAINING

Node.js API Masterclass with Express and Mongo DB

Udemy, Brad Traversy - 2021

Node with React Fullstack Web Development

Udemy, Stephen Grider - 2020

Zero To Mastery Academy

Complete React Developer in 2020 (w/
Redux, Hooks, GraphQL) - 2020

UX/UI Design of Digital Experiences

Universidad Nacional del Centro de la
Provincia de Buenos Aires - 2019

TUDAI, Computer Software Technology/Technician

Universidad Nacional del Centro de la
Provincia de Buenos Aires - 2017-2019

Industrial Designer, Product Design

Universidad Nacional de Mar del Plata -
2008-2012
